

Momentum-grid convergence, measured against the validated truth (new-192)

$P_m(k)$ relative error vs. momentum bins N_q ; old's residual floor traces its own $+1.9\%$ (β^2) deposit bias, diluted by P_m (not resolution)

$\Gamma^{-1} = 0.1$ Gyr, $\nu = 0.03$ (early)

$\Gamma^{-1} = 1$ Gyr, $\nu = 0.011$
